(54) CONSTANT HEALTH CONTROL SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To control health without via a hospital, to grasp data when a symp tom occurs for taking a secure action.

SOLUTION: A user carries a portable health condition data measuring instrument 11 with himself/herself while living a daily life. The measuring instrument 11 transmits the constantly measured data of each sensor fitted to the user's body to the health condition monitoring program of a portable telephone set 12, which transmits the measured data to the server 21 of a management center 2 via the Internet 3 by a public telephone network or an I mode (R) by a fixed cycle. The server 21 receives and accumulates the measured data to construct a health control database and analyses past data to detect whether received data is normal or abnormal. When it is normal, health condition data is transmitted to the user, a contract doctor and hospital by a fixed cycle (every month, etc.). When it is abnormal, the data is immediately transmitted to the user, the contract doctor and hospital and displayed on a monitoring equipment 23 and the user's portable telephone set 12.
